SIXTY by DevMate

Auto Listing
User Guide

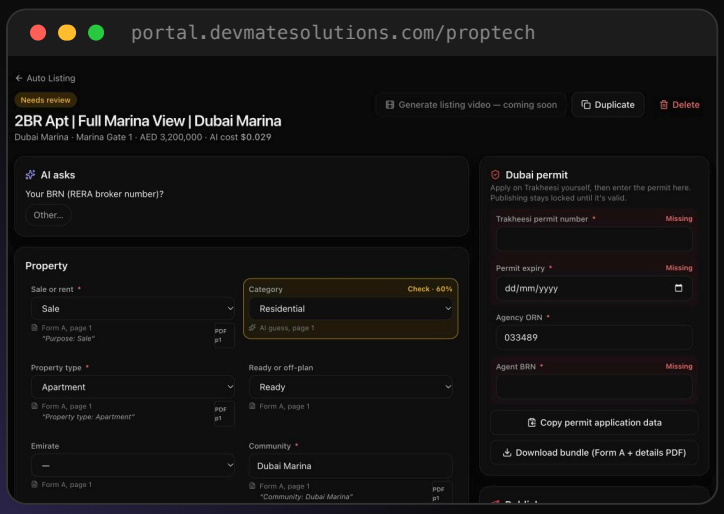

Upload a Form A and photos. Sixty's AI reads them, fills in the listing, writes the English and Arabic copy and gets it onto Property Finder and Bayut, while you stay in control.

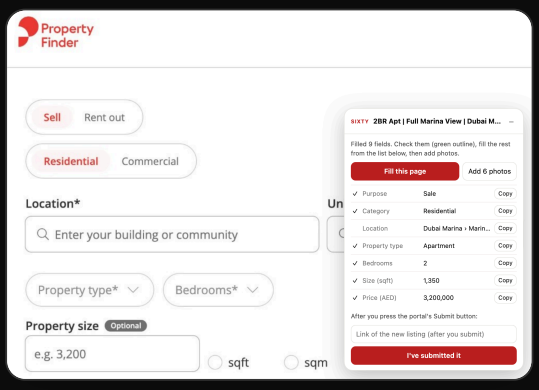

About 1 minute per listing

English + Arabic

Property Finder & Bayut

Every step logged

For agents and agency admins

Version 1 · November 2026

OVERVIEW

How Auto Listing works

You give Sixty the paperwork once. The AI does the reading, typing and writing; you check it, add the Trakheesi permit and approve. Sixty then posts it to the portals and keeps a record of everything.

You · Sixty AI · Sixty posts & tracks

Upload	AI reads	AI writes	You check	Publish	Live
Form A + 5–50 photos	Fields, photos, voice note	English & Arabic copy	Answer questions, add permit	API, Bayut feed or Chrome extension	Status & log in Sixty

~1 min
from upload to a written, reviewed-ready listing

≈ $0.03
AI cost per listing, shown on every listing

10
listings you can upload in one go

Sixty AI does

- Reads the Form A (PDF or photos of pages) and fills every field it can find.
- Shows where each value came from, with the quote and page.
- Labels rooms, picks a cover, suggests a photo order and flags weak photos.
- Turns your voice note into text and uses it.
- Writes the title and description in English and native Arabic.
- Asks only for what's missing, as quick questions.

You do

- Upload the Form A and photos (and anything else useful).
- Check the fields, especially the ones marked Check.
- Apply for the Trakheesi permit and enter its number and expiry.
- Press **Publish**. That's your sign-off, logged with your name.
- On portals without an API connection: press the portal's own Submit after the extension fills the form.

BEFORE YOU START

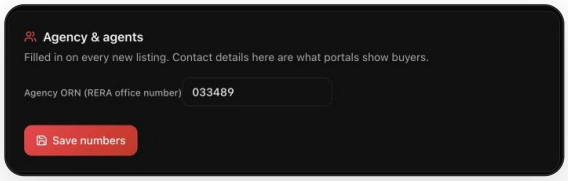

One-time setup

Do this once per agency, and the Chrome extension part once per agent. It takes about five minutes.

A · Save your agency and agent numbers

Admin

1. Open **PropTech → Portal Settings**.
2. Under **Agency & agents**, enter the agency **ORN** (RERA office number).
3. For each agent, enter their **BRN**, the phone and email buyers should see, and their Property Finder user ID if you have it.
4. Press **Save numbers**. Every new listing is filled in with these automatically.

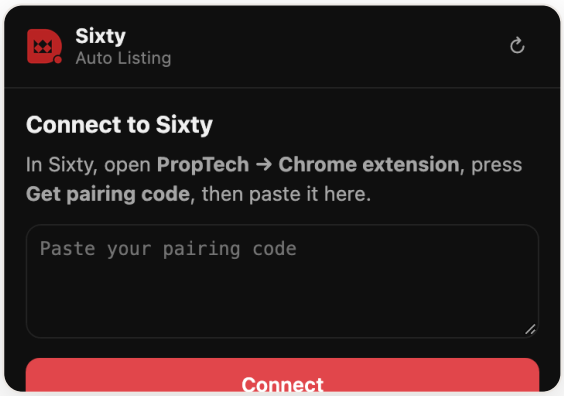

PropTech → Portal Settings

✦ If an agent's BRN is missing, the AI will ask for it on each listing. Saving it here means it never has to.

B · Install the Sixty Chrome extension

Each agent · Google Chrome on a computer

1. Open **PropTech → Chrome extension** and press **Download**. Unzip the file: you get a folder called **sixty-extension**.
2. In Chrome go to **chrome://extensions** and switch on **Developer mode** (top right).
3. Press **Load unpacked**, click once on the **sixty-extension** folder and press **Select**. Chrome only accepts the folder, not the zip.
4. Click the puzzle icon in Chrome's toolbar and pin **Sixty Auto Listing**.
5. Back in Sixty press **Get pairing code → Copy**. Click the Sixty icon, paste the code and press **Connect**.

The extension, ready to be paired

! **Treat the pairing code like a password.** It lasts 90 days and works only for you. Lost a laptop? Press **Disconnect** and every old code stops working.

CHECKLIST

What to upload

The more the AI can read, the less you type. Only the Form A and five photos are required.

ITEM		WHAT THE AI USES IT FOR	FORMAT
Form A / listing form	Required	Sale or rent, type, location, building, unit, floor, size, bedrooms, bathrooms, price, the owner's details, Form A number and expiry.	PDF, or a photo of each page (JPG, PNG, HEIC). Up to 25 MB each.
Property photos	5 to 50	Room labels, cover choice, photo order, amenities it can see (pool, gym, view), and quality warnings.	JPG, PNG, HEIC or WebP. Up to 25 MB each.
Title deed or **Oqood**	Optional	Confirms the unit, size and owner. Documents win over notes for legal details.	PDF or photos.
Floor plan	Optional	Layout and size checks; can be published with the photos.	PDF or image.
Voice note	Optional	Record it in the browser or upload one. Say what makes the home special: upgrades, view, vacancy, viewing times. Used for the description.	Up to 3 minutes. m4a, mp3, webm, ogg, wav.
Notes	Optional	Same as the voice note, typed.	Text.

Photos that portals accept

✓ Do

- Landscape, bright, level shots.
- At least 800 px on the short side (most phones are far above this).
- One clear exterior or view photo you'd be happy to see as the cover.
- Every main room at least once.

✕ Avoid

- Watermarks, logos, phone numbers or text on the photo: portals reject these.
- People, number plates or personal items.
- Screenshots and collages.
- Very dark or blurry shots. Sixty flags them so you can swap them.

🔒 **Owner details stay private.** The owner's name, phone and Emirates ID / passport from the Form A are stored encrypted, shown only to agency admins, and never sent to any portal or to the Chrome extension.

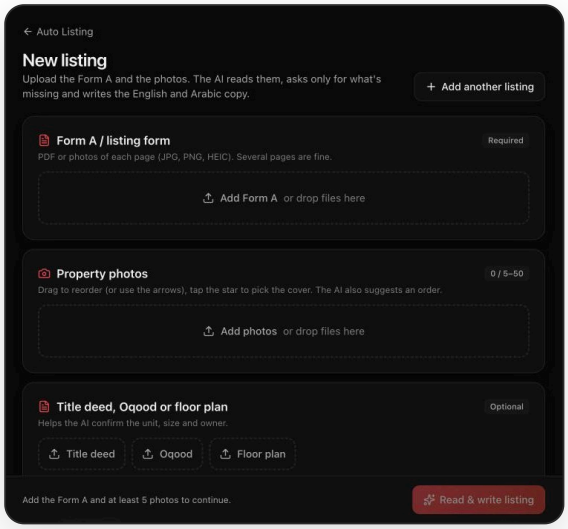

1 STEP ONE

Upload and let the AI work

One screen, one button. The AI takes about a minute and you can leave the page while it works.

1. Go to **PropTech → New Listing**.
2. **Add Form A**: drop the PDF, or several photos of its pages.
3. **Add photos**: drop 5 to 50 at once. Each shows its own progress bar. Tap the ☆ to choose the cover yourself, or let the AI choose.
4. Optional: add a title deed, Oqood or floor plan, record a voice note, or type notes.
5. Press **Read & write listing**. The button lights up once the Form A and five photos are in.

✦ **Several properties?** Press **Add another listing** to fill up to 10 cards on one screen, then start them all together.

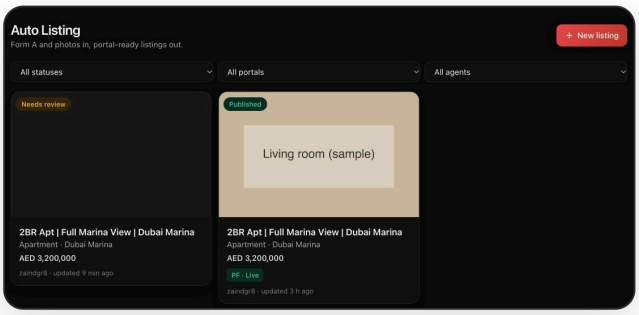

PropTech → New Listing

What happens next

1. **Reading Form A**
   Every field, with the page and quote it came from.
2. **Analysing photos**
   Rooms, cover, order, visible amenities, quality.
3. **Transcribing voice note**
   Only if you added one.
4. **Writing the English description**
5. **Writing the Arabic description**
   Written natively in Arabic, not translated word for word.

A live checklist shows each step as it finishes. When it's done, the listing opens for review with the status Needs review.

Closed the page? Find it any time under **PropTech → Auto Listing**, where every listing shows its status, price and the portals it's on.

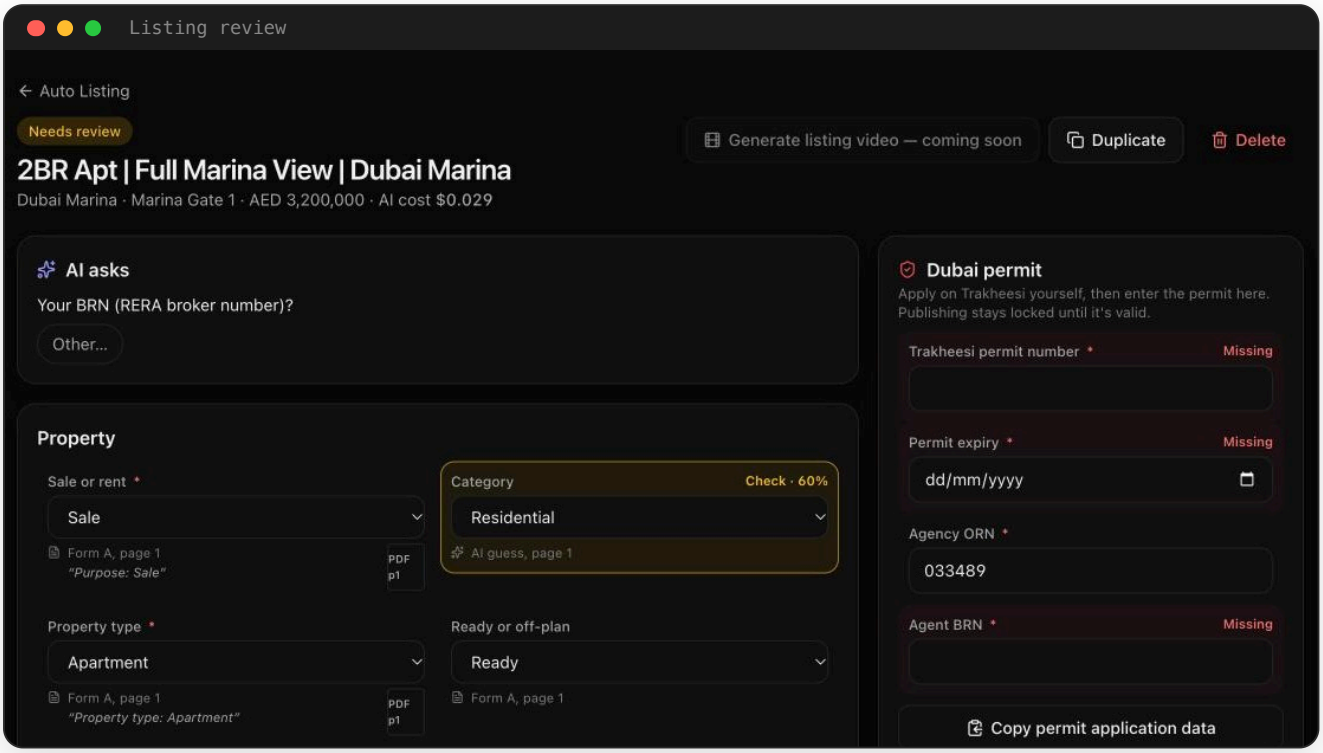

PropTech → Auto Listing

2 STEP TWO

Review the AI's work

Everything the AI filled in is editable, and every value tells you where it came from, so checking takes seconds.

✦ AI asks

Only what the AI couldn't find, as quick questions. Tap a suggested answer or **Other...** to type one.

Sources

Under each field: *Form A, page 1 · "Purpose: Sale"*. Tap the PDF tag to open that page.

Check · 60%

An amber box means the AI was unsure or guessed. Look at these first. Anything you change is marked as yours and the AI never overwrites it.

Field labels you'll see

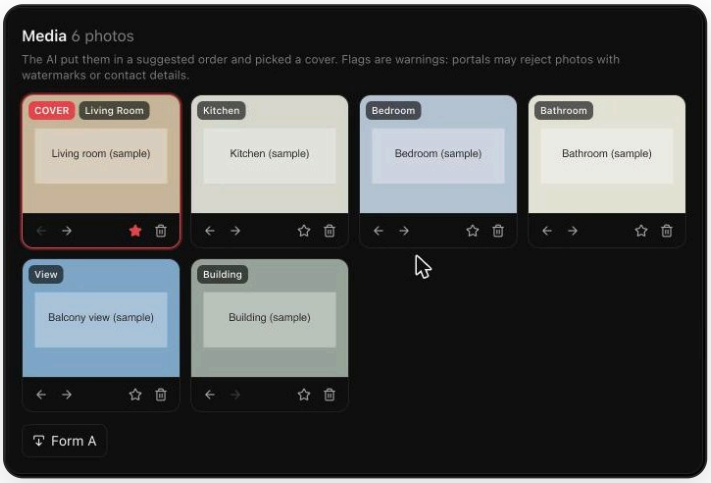

Form A, page 1	Read directly from the document. Documents win for legal details: unit, size, owner, price.
Photos	Seen in the photos, such as amenities or the view.
Voice note / Notes	From what you said or typed. These win for marketing details: upgrades, highlights.
AI guess	Worked out, not read. Always shown with Check.
Agent	You entered or changed it.

3 STEP THREE

Photos and copy

The AI has already sorted the photos and written both languages. Adjust anything you like.

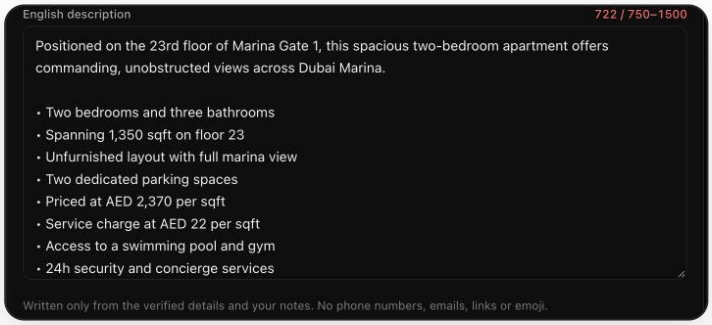

Photos

- Each photo has a room label.
- The COVER is the first photo portals show. Tap ☆ on another photo to change it.
- Use the arrows to reorder.
- The bin removes a photo from the listing (you can restore it).
- Warnings such as low resolution or a watermark appear on the photo.

English and Arabic copy

- Switch between **English** and العربية.
- Pick a tone: **Professional**, **Luxury** or **Investor**, then press **Regenerate**.
- Edit the text directly if you prefer.
- The counter shows the length portals expect: **750 to 1,500** characters for descriptions.
- The AI writes only from verified details and your notes. It never adds phone numbers, emails, links or emoji, which portals reject.

✦ Added something to your notes or voice transcript after the AI wrote the copy? Press **Regenerate** so it's included.

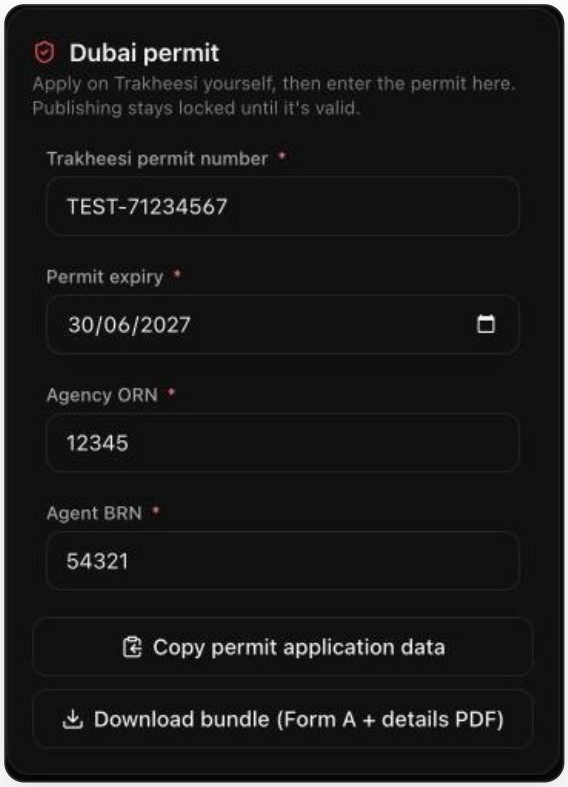

4 STEP FOUR

Trakheesi permit and checklist

Dubai requires a valid Trakheesi advertising permit on every listing. Sixty helps you apply, then locks publishing until the permit is in.

1. Press **Copy permit application data**. Everything the Trakheesi form asks for is copied in one go. **Download bundle** gives you the Form A plus a details PDF to attach.
2. Apply on Trakheesi as usual.
3. Back in Sixty, enter the **Trakheesi permit number** and **Permit expiry**.
4. Check the **Agency ORN** and **Agent BRN** (filled from Portal Settings).

! **Sixty never makes up a permit.** Only a real Trakheesi permit can be entered. An expired permit blocks publishing until it's renewed.

The Dubai permit box

The pre-publish checklist

Before the Publish button unlocks, every line must be green:

- ✓ Valid Trakheesi permit
- ✓ Required details filled in
- ✓ At least 5 good photos and a clean cover
- ✓ Title and description fit the portals' rules

Each red line has a **Fix** link that jumps to the field.

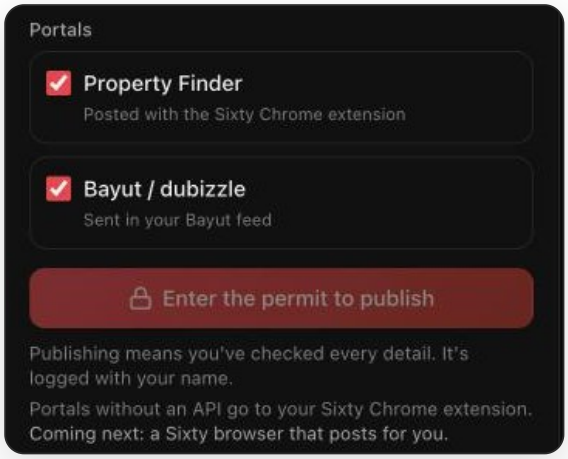

5 STEP FIVE

Publish

Tick the portals and press Publish. Sixty picks the best way to post to each one automatically.

1. In the **Publish** panel, tick **Property Finder**, **Bayut / dubizzle** or both. Under each it says how it will be posted.
2. Press **Publish**, then confirm with **Yes, it's right. Publish**.
3. If something looks unusual, like a price far from similar homes, Sixty asks you to confirm before going ahead.

! Publishing means you've checked every detail. It's recorded with your name and the time.

Choose portals. Locked until the checklist is green.

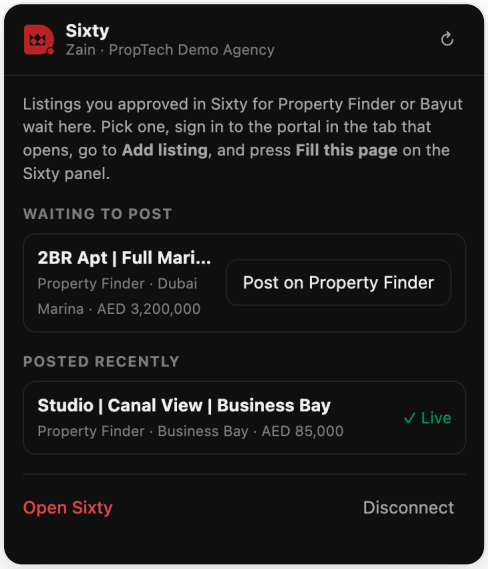

How each portal is posted

WHEN YOUR AGENCY HAS…	WHAT SIXTY DOES	WHAT YOU DO
Property Finder API connected Portal Settings → Property Finder keys	Sends the listing straight to Property Finder and follows its status until it's live.	Nothing.
Bayut feed switched on Portal Settings → Bayut feed URL	Adds the listing to your agency's Bayut feed. Bayut picks it up on its next read (the feed refreshes every 5 minutes).	Nothing.
Neither yet	The listing waits in your **Sixty Chrome extension**, ready to fill the portal's own form. See Step 6.	Open the portal, check, press Submit.
No extension either	**Copy & paste posting** on the listing gives every field in the portal's order, plus **All photos** as a zip.	Paste into the portal, then press **I've posted it**.

6 STEP SIX

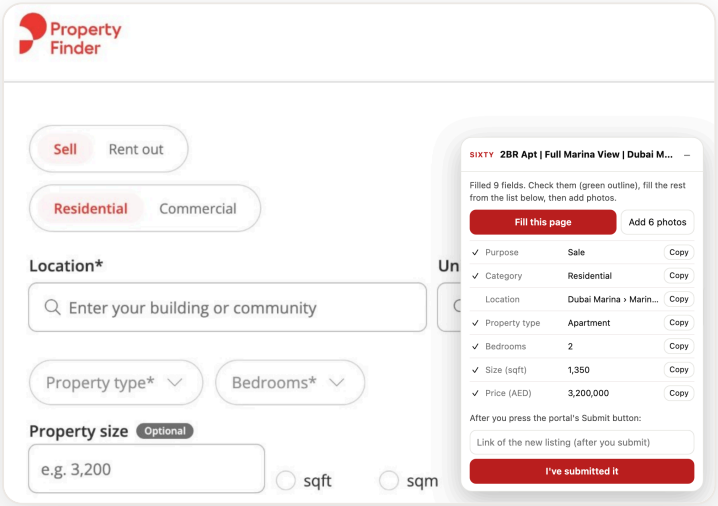

Post with the Chrome extension

For portals not connected by API or feed. Sixty fills the portal's own form and photos in your Chrome; you check and press the portal's Submit.

Click the Sixty icon: approved listings wait here

1. Click the **Sixty** icon in Chrome's toolbar. Your approved listing is under **Waiting to post**.
2. Press **Post on Property Finder** (or Bayut). The portal opens in a new tab.
3. Sign in if asked and open the portal's **Add listing** page. The **Sixty** panel appears at the bottom right with your listing.
4. Press **Fill this page**. Fields Sixty filled get a **green outline**.
5. On each step of the portal's form press **Fill this page** again, then the portal's **Next**. On the photos step press **Add photos**: they go in cover first.

The Sixty panel on the portal's Add listing page

6. Anything Sixty couldn't fill has a **Copy** button. Pick the **Location** from the portal's suggestion list yourself, and type the unit number.
7. Check everything and press the **portal's own Submit**. Sixty never submits for you.
8. Paste the new listing's link into the panel and press **I've submitted it**. In Sixty the listing now shows PF · Live.

AFTER PUBLISHING

Tracking and changes

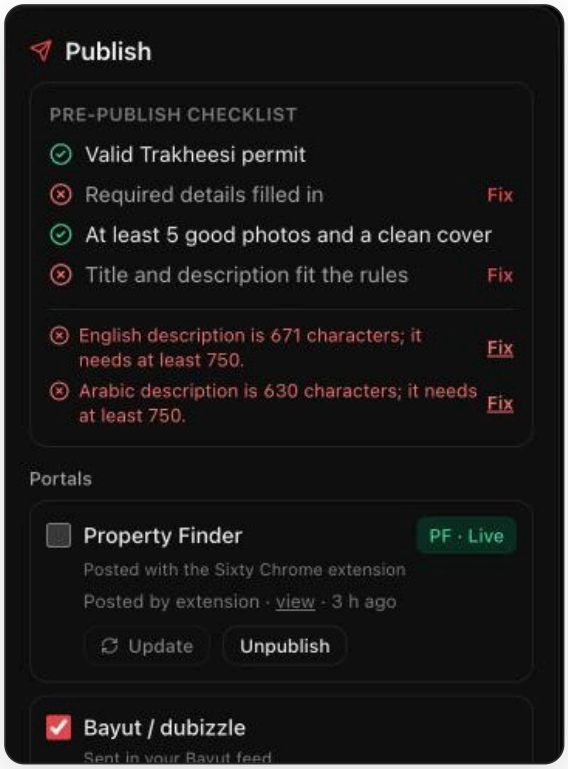

Every listing shows where it's live, and every action, by a person, the AI or the extension, is recorded.

Listing status

Draft	Not sent to the AI yet.
AI working	Reading and writing. About a minute.
Needs review	Ready for you to check.
Approved	You published; on its way to the portals.
Published	Live on at least one portal.
Failed	The AI step couldn't finish. Fill in by hand or try again.

Portal status

Queued	Waiting to be sent, or waiting in the extension.
Submitted	The portal is checking it.
Live	On the portal. Tap **view** to open it.
Rejected	The portal said no. The reason is shown in plain words; fix and publish again.
Expired	The permit or listing ran out.

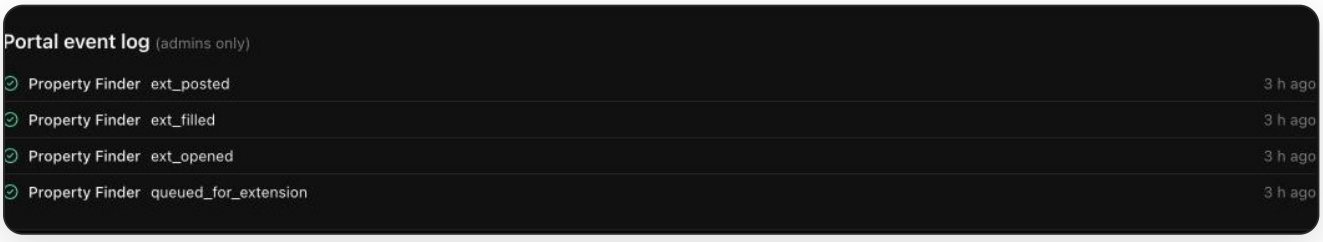

A live listing: Update or Unpublish any time

Changing a live listing

Edit the fields, photos or copy, then press **Update** next to the portal. To take it down, press **Unpublish**. If you posted it with the extension or by hand, remove it on the portal too, then press **I took it down**.

The record

The Portal event log (admins) shows each step. The Audit log records who published, changed the permit or unpublished.

HELP

Questions and rules

The AI got a field wrong.

Change it. Your value is marked as yours and the AI won't overwrite it, even if you regenerate the copy.

The checklist says the description is too short.

Portals want 750 to 1,500 characters. Add a detail to your notes and press Regenerate, or add a sentence yourself.

Publish is greyed out.

Look at the pre-publish checklist: each red line has a Fix link. Most often it's the permit or the BRN.

The listing is stuck on "AI working".

Keep the listing page open for a minute. If it says the AI step failed, fill in the fields by hand, or ask your admin to look at it.

A photo failed to upload.

Check it's a JPG, PNG, HEIC or WebP under 25 MB, and try again. Large files upload straight to secure storage, so a weak connection is the usual cause.

The Sixty panel doesn't appear on the portal.

Check the extension is paired (click the icon: it shows your name). Then open the listing from **Post on...** in the extension so the panel knows which listing to use.

"Fill this page" missed some fields.

Portals change their forms. Use the Copy buttons for the rest. Sixty updates its fill rules centrally, with no reinstall needed.

The extension says it isn't connected.

Your code expired or was disconnected. Get a new code under PropTech → Chrome extension and paste it in.

Can I ask questions about my listings?

Yes. Press **Ask Sixty** (⌘J) and ask, for example, "Which listings still need a permit?"

The rules Sixty always follows

1. **A person approves every listing.** Nothing reaches a portal until someone in your agency presses Publish.
2. **Permit first.** No valid Trakheesi permit, no publishing.
3. **Owner data is private.** Never published, never sent to portals or the extension, shown only to admins.
4. **Each agency is separate.** No agency can see another's listings, files or numbers.

Need help?

Contact your agency admin or the DevMate team. Coming next: a Sixty browser that posts to every portal for you.
